

Instructions for installing the *Complete Metalsmith Suite*

On Windows 95, 98, 2000, NT and Windows XP

1. Install the JRE from <http://java.sun.com/j2se/1.4.1/download.html>
2. Place the files metalsmith.html & Metalsmith.jar into any folder that you prefer. Double click on the metalsmith.html file to run the application.

Macintosh OS X

No need to install MRJ as it comes built in. Place the files metalsmith.html & Metalsmith.jar into any folder; double click on the metalsmith.html file to run the application.

Macintosh OS 8.x and 9.x

1. You need a file called Mac Runtime Java (MRJ). Many recent Macs will have the MRJ installed; if not, download it from

<http://developer.apple.com/java/download.html>

2. Drag the file swingall.jar from this page onto your desktop, then drag it into the following folder:

System Folder:

- > Extensions
 - > MRJ Libraries
 - >MRJ Classes

Place the files metalsmith.html & Metalsmith.jar into any folder that you prefer; double click on the metalsmith.html file to run the application.
